

UHF Flat Panel Antenna

SHARKFIN LOG PERIODIC ANTENNA FOR TV RECEPTION 10dB GAIN

This antenna will do more than anything else to improve your video reception. Reduces double images and rolling pictures. This broadband antenna http://en.wikipedia.org/wiki/Log_periodic_antenna is tuned for 400-1000 MHz or TV channels 14-69. The high gain extends the usable range of transmitters. Highly recommended for good results even at short range where it reduces flicker. Reduces multipath <http://en.wikipedia.org/wiki/Multipath> (out of phase signals that cancel the direct signal) and rejects signals from the side and back. Beam width is 50° Horizontal and 90° vertical (with antenna mounted for vertical polarization). It fits easily into a small 1500 Pelican case. 50Ω low loss cable with female BNC connector. This solid professional antenna comes with a 5/8" baby spud mount. Forward gain 10dbi for channels 14-69, front to back ratio 20dB. Dimensions: 14 1/2" x 9-1/2" x 2". For cables up to 50 feet use RG8X a low loss 50-ohm cable.

Price: \$ 175.00

TU1041U Tuner - We have used tuners in stock, discontinued by Sony. Bulletproof. 12V power or AC.

TU1041U with manual fine-tuning \$ 550.00

TU1040 without the fine tuning facility \$ 450.00

4-Antenna Diversity Tuner

The tuner is controlled by the remote only. Our field tests show this tuner to be as good as any other 4-antenna diversity. Antenna switching is not visible. Power cable 4XLR(M) to custom LEMO – you need one: \$ 110.00 additional Charge.

MOD-QUAD with one remote **\$ 1,450.00**
